

## “The Age of Innovation: How The Innovation Will Benefit The Senior?”

Ling Sien Ngan

Clinic Laser & Cosmetic Surgery Ling, Malaysia

### Abstract

**A** Statement of the Problem: Keeping in mind the elderly have compromised/impaired sight, hearing, touch, coordination, memory and cognition, some gadget looks intimidating or lesser functionality than comprehensiveness. There are so many hi-tech gadgets to assist elderly. Some expensive, difficult to learn interface or its function cannot be seen or selected easily, duplicating applications between marginally improved gadget, non user friendly, fast evolving yet to mature but getting outdated fast, or too miniaturised button to see & handle. Elderly will have difficulty to choose which technology gadget is useful for his individualised scenario, such that money spend is worthwhile for single gadget that can meet several needs, instead of buying several gadgets with one covering a single function. Technology used include timer like alarm clock to remind routine chore like taking medicine, GPS for position identification if lost, 5G for heavy realtime data integration like driverless car, flying taxi, chef cooking robot.

### Methodology & Theoretical Orientation:

Utilising a commonly used subjective analysis by reviewing literature, clinical history taking, interview & observation over charity event, and forming focus group to gather data. Using the security framework & lenses of analysis of the social science/behaviour to understand what are the gadget acquired by the elderly, its performance, relevance, functionality & efficiency, if it can be optimized for as many a conditions it can solve for the elderly.

### Biography:

Dr Ling has his expertise and passion in improving healthcare delivery and health security of the individual, community & national economic wellbeing, especially through financial

planning. He analyse not just as a doctor but through the lens of social scientist from the security perspective as a strategist and policy planner, where much work is done through qualitative analysis via very extensive literature review, augmented by clinical interview and physical assessment. Ageing challenges face more security dimension than just medical and, a constructivist society has a better security provision.
