OPINION

Women Health alludes to the strength of ladies, which varies from that of men from numerous points of view. Ladies' wellbeing is a case of populace wellbeing, where wellbeing is characterized by the World Health Organization as "a condition of complete physical, mental and social prosperity and not only the non-attendance of sickness or ailment". Frequently rewarded as basically ladies' conceptive wellbeing, numerous gatherings contend for a more extensive definition relating to the general strength of ladies, better communicated as "The soundness of ladies". These distinctions are additionally exacerbated in creating nations where ladies, whose wellbeing incorporates both their dangers and encounters, are additionally impeded.

Despite the fact that ladies in industrialized nations have limited the sexual orientation hole in future and now live longer than men, in numerous territories of wellbeing they experience prior and progressively extreme sickness with less fortunate results. Sex stays a significant social determinant of wellbeing, since ladies' wellbeing is impacted by their science as well as by conditions, for example, neediness, business, and family duties. Ladies have for quite some time been burdened in numerous regards, for example, social and monetary force which confines their entrance to the necessities of life including human services, and the more noteworthy the degree of inconvenience, for example, in creating nations, the more noteworthy antagonistic effect on wellbeing [1,2].

Ladies' regenerative and sexual wellbeing has an unmistakable contrast contrasted with men's wellbeing. Indeed, even in created nations pregnancy and labor are related with considerable dangers to ladies with maternal mortality representing in excess of a fourth of a million passings for each year, with huge holes between the creating and created nations. Comorbidity from other non conceptive illness, for example, cardiovascular infection add to both the mortality and dreariness of pregnancy, including preeclampsia. Explicitly transmitted contaminations have genuine ramifications for ladies and babies, with mother-to-kid transmission prompting results, for example, stillbirths and neonatal passings, and pelvic fiery sickness prompting barrenness. Moreover fruitlessness from numerous different causes, anti-conception medication, spontaneous

pregnancy, unconsensual sexual movement and the battle for access to fetus removal make different weights for ladies.

"There is no reason why technology should be limited to computers. Properly understood, any new and better way of doing things is technology" [1]. It allows messages to arrive quickly, we are apparently more connected and can be used as a tool for cognitive change and personal and collective change behavior. And the common denominator in everything is language, the vehicle is the technology we use. This oral communication is an informative and reflective journey from a SexTech Industry expert for those who are not in it and professionally deal with sexual health. We have studied the points where more controversy and gaps are generated in this aspect and are in need of the intervention of the scientific, civil and industry community. We must start by reformulating the language around sex, and where we place our sexual speeches-for there to be faster social change, there must be a liberation for both, men and women to explore and examine their own sexuality in pleasurable terms, but advertising, sex education, and pornography are three sources that have perpetuated the myths and falsehoods of what we know as the language of sex. Incorporate a no biased and standardized language, redefine now, when it is just beginning, the appearance of sexual robots in the form of women and based on an almost pornographic model, designed primarily for the pleasure of men, perpetuating misogyny and objectification of women and the prohibition of this technology is not the solution, the solution is to redefine the message, the scripts, tones about sexuality and use technology, gaming, robots and virtual reality to achieve positive and empowering change, through language. Sexual communication tries to bring an ambitious proposal to the scientific, civil and industry community to generate changes in the next generations by modifying the language in three aspects.

In a society where advertising generates a single beauty role model based on a fictional perfection, an adult entertainment industry where it predominates the unrealistic expectations promoted in pornography, are setting the benchmark for what is considered sexual normal patterns, plus the messages sent by its storylines and vocabulary are detrimental to how we view sex and in a society where failures in sex education are significant

pillars of this problem. Sex education based on family planning and the prevention of STDs, which is very valid but allows practitioners to medicalize and make genitalia the centered the speech of sex education until the point that for today countless studies still tell us that first sexual encounters of young people (still) aren't really responsible, not entirely reciprocal, and not exactly pleasant.

So, do we stand against technology what is coming or we collectively unite knowing what there is and try to change the language?
