Issues that might be capable can include sentence structure (grammar or potentially morphology), semantics (which means), or different parts of language. These issues might be open (including disabled language appreciation), expressive (including language creation), or a blend of both. Models incorporate explicit language hindrance, better characterized as formative language issue, or DLD, and aphasia, among others. Language problems can influence both communicated in and composed language, and can likewise influence communication via gestures; normally, all types of language will be impaired.
