## DESCRIPTION

Coronavirus has influenced everyday life and is hindering the worldwide economy. This pandemic has influenced a great many people groups, who are either wiped out or are being killed because of the spread of this illness. The most widely recognized manifestations of this viral contamination are fever, cough, headache, bone pain and breathing issues, and eventually prompting pneumonia. This, being another viral infection influencing people interestingly, antibodies are not yet accessible. Consequently, the accentuation is on playing it safe like broad cleanliness convention (e.g., routinely washing of hands, aversion of vis-à-vis connection and so forth), social separating, and wearing of covers, etc. This infection is spreading dramatically locale shrewd. Nations are forbidding social events of individuals to the spread and break the outstanding curve. Many nations are locking their populace and implementing exacting isolate to control the spread of the devastation of this profoundly transmittable infection.

COVID-19 has rapidly affected our day to day life, businesses, disrupted the world trade and movements. Identification of the disease at an early stage is vital to control the spread of the virus because it very rapidly spreads from person to person. Most of the countries have slowed down their manufacturing of the products. The various industries and sectors are affected by the cause of this disease; these include the pharmaceuticals industry, solar power sector, tourism, Information and electronics industry. This virus creates significant knock-on effects on the daily life of citizens, as well as about the global economy.

As of now the effects of COVID-19 in day by day life are broad and have extensive results. These can be isolated into different classifications:
