Dear Sir/Madam,

I am addressing this letter in order to recommend the Journal of Genetic Syndromes & Gene therapy as a journal which should be indexed in PubMed. The Journal of Genetic Syndromes & Gene Therapy is an international, open access, peer-reviewed scientific journal which emphasizes at the documentation of phenotype analysis, birth defects, linking genetic variations to disease, genetics of complex disease, management/intervention of genetic diseases, and novel therapies for genetic diseases. Since it was first launched, the journal has managed to achieve publications of high standards in the aforementioned fields. As a result of this work the journal has presented with an unofficial 2012 impact factor of 5.89. The editorial board members and journal staff have worked very hard for the journal to establish its high professional standing and therefore I am recommending this journal to be indexed in PubMed.

With kind regards

Haris Kokotas, Ph.D.
