

Effects of Di-(2-Ethylhexyl) Phthalate on Oxidative Stress and Lipid Metabolism in Livers of Male *Xenopus tropicalis*

SUPPLEMENTARY MATERIALS

Gas chromatography tandem mass spectrometer

The analytical conditions were as follows: Agilent HP-5 MS column ($30 \times 250 \mu\text{m} \times 0.25 \mu\text{m}$); column temperature: held at 80°C for 1 min, increased at a speed of $20^\circ\text{C}/\text{min}$, to 290°C and held for 5 min; Inlet temperature: 280°C , MSD transmission line temperature: 280°C , flow rate: 1.0 mL/min; MS ionization temperature: 230°C , MS quadrupole temperature: 150°C . The retention time of DEHP is 11.997 min, and m/z are 149 and 167.

Supplementary Table S1: Concentrations of DEHP in the surface water over the world.

Location	Concentration	Unit	References
Changjiang River Estuary	0.26	ng/L	Junaid et al., 2018
Changjiang River Estuary	7.67	ng/L	Zhang et al., 2017
